Have you ever wondered where we come from?

In this fully online course you will learn about the evolution of humankind, covering millions of years of biological and cultural history: who our primate ancestors were, what they looked like, what they ate and the behaviors that made us human, including bipedalism, the origins of hunting and gathering food, the earliest tools, language and cognition, and more. We will explore some of the reasons for our shared traits and diversity of cultures over the world. We will cover some of the basic concepts and theories that paleoanthropology and archaeology use to understand the origins of human societies.
